EDUFINANCE

FINANCIAL EDUCATION PLATFORM

PROJETO CONTEXT

The EduFinance platform emerges as an integrated solution that combines financial education and cutting-edge technology to democratize access to the capital market. The ecosystem was designed to transform the user journey, from organizing personal finances to executing complex investments, using the security of blockchain technology to guarantee the integrity of operations and portfolio simulations.

WHO TO CONSIDER

Young Investors

EXISTING RESEARCH

An analysis based on PISA (Programme for International Student Assessment) data showed that Brazil ranked 17th out of 20 countries evaluated in financial literacy, highlighting the need to expand access to financial education for young people. The study also revealed that 89.8% of young Brazilians learn about money primarily at home, while only a portion receive adequate financial guidance at school. Furthermore, research with Brazilian students indicates that many young people have limited knowledge of financial planning, investments, and expense control, demonstrating insecurity in managing their own money.

Conclusion These data reinforce the importance of platforms like EduFinance, which seeks to democratize access to financial education through technology, practical simulations, and accessible content for young investors.

DATA COLLECTION METHODS

Online Questionnaires

Interviews

Bibliographic Research

Benchmarking

OBSERVATION PLAN

During the research, the following will be observed:

- How young people currently learn about finance
- Digital tools used for financial control
- Difficulties encountered when making investments
